# ICEfaces™ Project Integration Plugin for NetBeans 6.1

## Contents

## Overview

The ICEfaces Project Integration for NetBeans 6.1 provides the ICEfaces framework as an extension of the JSF Frameworks for use in NetBeans Web Projects.

The following functions are provided:

1. Create a new ICEfaces Web project.  Configures required libraries and configuration files, changes the deployment descriptor and configures the IDE so you are ready for development.
2. Create a new Visual Web ICEfaces project.  Configures required libraries and configuration files, changes the deployment descriptor and configures the IDE so you are ready for development using the NetBeans Visual Web JavaServer Faces page designer.

## Requirements

- The ICEfaces Project Integration plugin requires Netbeans 6.1.
- The ICEfaces Project Integration plugin depends on the ICEfaces Run-Time Libraries plugin.

Please install the ICEfaces Run-Time Libraries plugin prior to installing the ICEfaces Project Integration plugin.

---

## Installing the ICEfaces Project Integration

The ICEfaces Project Integration depends on the ICEfaces Run-Time Libraries plugin. Please install ICEfaces Run-Time Libraries plugin before proceeding with the following steps:
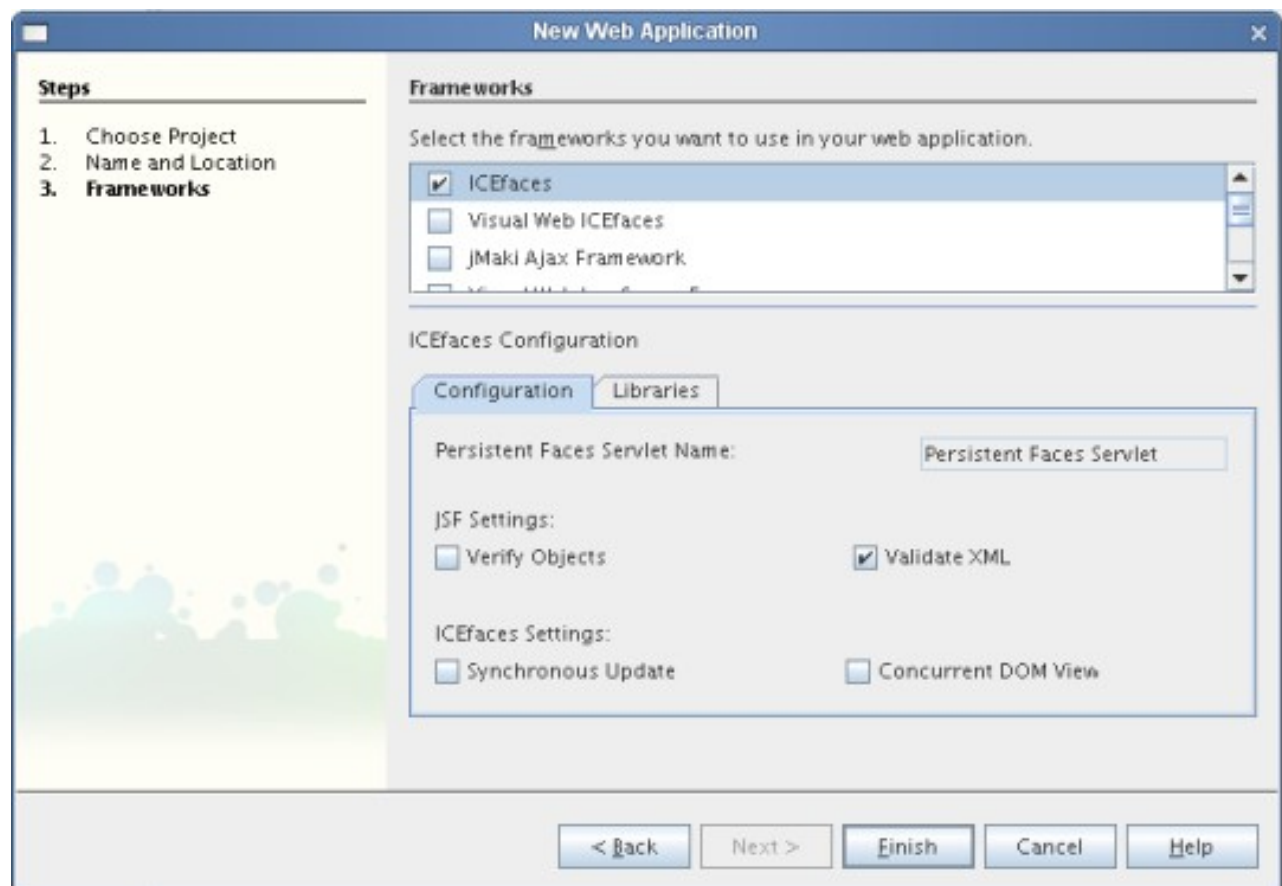

1. Download the "**ICEfaces-1.7.2-sp1-Netbeans-6.1-modules.zip**" file and save it locally.
2. Unzip the zip file to a directory and verify that the "**com-icesoft-faces-vwp-ide.nbm**" file exists in the directory.
3. Start NetBeans 6.1.
4. From the main menu, select **Tools --> Plugins**.
5. Select **Downloaded (.nbm Files)**.
6. Click **Add Plugins**.
7. Click **Add** and then browse to the directory where you saved the **"com-icesoft-faces-vwp-ide.nbm"** file.
8. Select the file.
9. Select/check the **Install** checkbox.
10. Click **Install** to allow the installation.

Note, please uninstall any previous versions of the ICEfaces Project Integration prior to installing this plugin.

## Add the ICEfaces Framework to a new Web Project

Create a new Web Project using web frameworks.

1. Choose New Project --> Web --> Web Application.
2. In the Name and Location View, enter the Name and Location of the project.
3. In the Framework View, select ICEfaces (note that you should not select the JavaServer Faces or Visual JavaServer Faces frameworks when using ICEfaces, just ICEfaces).
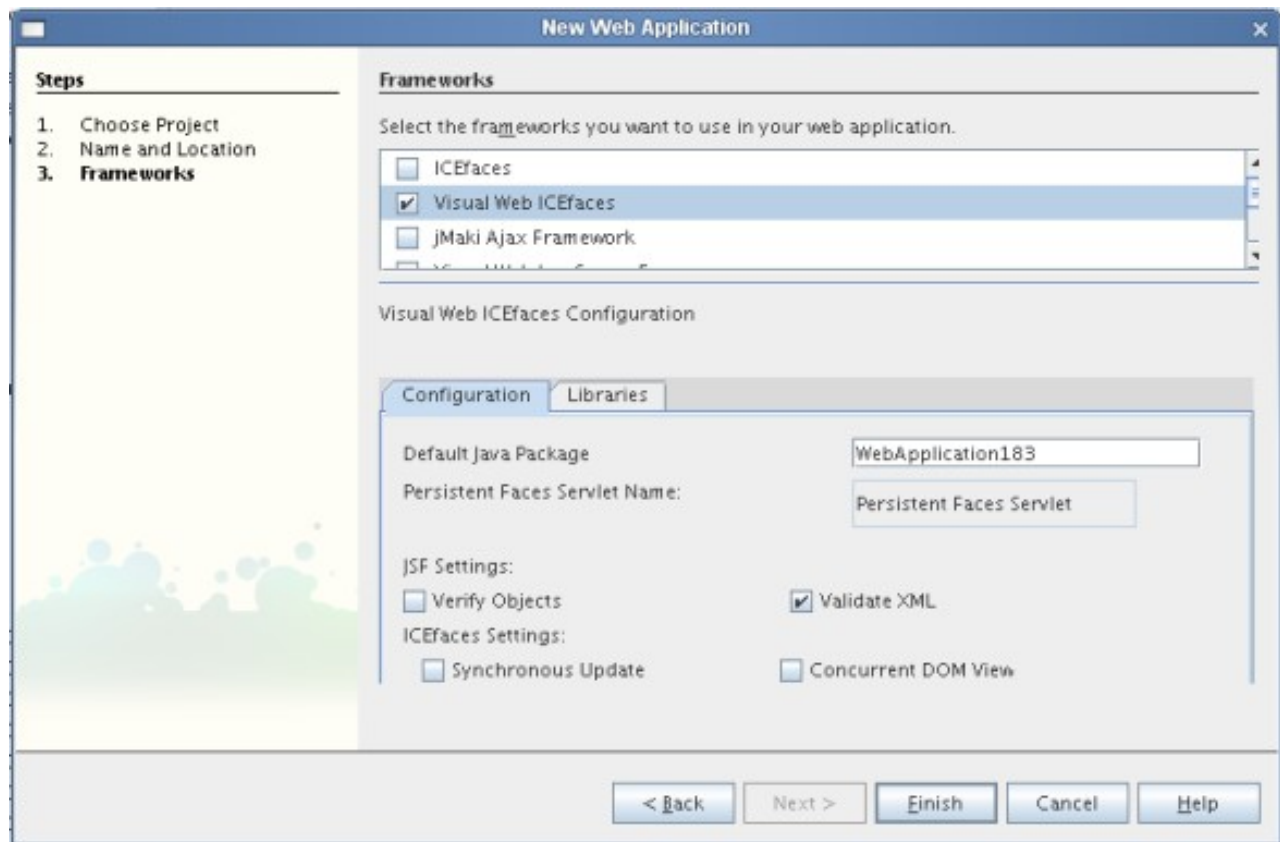

4. Enter any desired parameters in the options dialog, including selecting the ICEfaces Run-Time library version to use.
5. Click Finish.

## Add the Visual Web ICEfaces Framework to a new Web Project

Create a new Web Project using web frameworks.

6. Choose New Project --> Web --> Web Application.
7. In the Name and Location View, enter the Name and Location of the project.
8. In the Framework View, select Visual Web ICEfaces Only.

9. Enter any desired parameters in the options dialog, including selecting the ICEfaces Run-Time library version to use.
10. Click Finish.

## Uninstalling the ICEfaces Project Integrtation

1. From menu bar, select Tools --> Plugins --> Installed.
2. Locate the plugin called **ICEfaces Project Integration**.
3. Select/check the **ICEfaces Project Integration** plugin.
4. Click the Uninstall button.

## Support

Open source community support is available at http://www.icefaces.org. Refer to the ICEfaces Tools forum for questions and answers specific to this NetBeans IDE integration.

- Support

## Overview

The ICEfaces Run-Time Libraries plugin provides ICEfaces Run-Time libraries for use with the ICEfaces Project Integration for NetBeans 6.1. In addition, the plugin also adds the ICEfaces Component Suite components to the NetBeans Visual Design component palette.

## Requirements

- The ICEfaces Run-Time Libraries plugin requires Netbeans 6.1.

## Installing the ICEfaces Run-Time Libraries Plugin

**Note**: To uninstall ICEfaces Netbeans Integration, follow the instructions described in .Uninstalling the ICEfaces Run-Time Library Plugin.

11. Download the "**ICEfaces-1.7.2-sp1-Netbeans-6.1-modules.zip**" file and save it locally.
1. Unzip the zip file to a directory and verify that the "**com-icesoft-ide-netbeans-libs-module.nbm**" file exists in the directory.
2. Start NetBeans.
3. From the main menu, select **Tools --> Plugins**.
4. Select **Downloaded (.nbm Files)**.
5. Click **Add Plugins**.
6. Click **Add** and then browse to the directory where you saved the **com-icesoft-ide-netbeans-libs-module.nbm** file.

7. Select the file.
8. Select **Install** checkbox.
9. Click **Install** to allow the installation.

---

## Uninstalling the ICEfaces Run-Time Libraries Plugin

1. From menu bar, select Tools --> Plugins --> Installed.
2. Locate the plugin called **ICEfaces Run-Time Libraries**.
3. Select/check the **ICEfaces Run-Time Libraries** plugin.
4. Click the Uninstall button.

---
